

PLCS-40

Fully digital controlled analog arbitrary pulse generator

Figure: Analog waveform

- Independent analog arbitrary function generator
- Freely programmable
- 400 MHz DAC spectrum
- 2 ns .. cw pulse width

Technical Data:*

Output	2 ns .. cw (10 ns .. 320 ns arbitrary programmable curve shapes)
<u>Data (arbitrary part):</u> Analog bandwidth DAC Resolution Storage capacity	400 Mhz, 2.5 ns sample rate >100 MHz 16 bit 515 points of each 16 bit (32 freely programmable curve shapes with max. 128 values at a pulse width of max. 320 ns)
<u>Data (pulse generator):</u> Min. pulse width Max. pulse width Min. repetition rate Max. repetition rate	2 ns cw 1 Hz 200 kHz
Supply voltage Coaxial output	+15 V -0.5 V .. 2.5 V into 50Ω -1 V .. 5 V into 1M
Trigger Inputs	50 Ω, 5 V, SMC connector 500 Ω, 5 V, 2-Pin connector
Interfaces	PLB-21
Dimensions	61 x 60 x 22 mm
Weight	50 g
Operating temperature	0 to +55 °C

* Technical data is subject to change without further notice.

** See manual for details.

Product Description:

The PLCS-40 is a freely programmable arbitrary pulse generator (pulsed-AWG). The internal storage allows to generate up to 32 different freely programmable curve shapes. The maximum repetition rate is 200 kHz. A very fast 16 bit-DAC generates pulse lengths from 10 ns to 320 ns.

The PLCS-40 is the perfect choice in combination with our laser diode drivers LDS-VRM 005, BFS-VRM 03 or BFPS-VRHSP 02.

The pulse generator is offered for those who require specific pulse shapes in order to modulate currents. Pulses with variable rise- and fall times or modified pulse shapes are possible. Typical applications are driving seed laser diodes or other laser diodes for materials processing, LIDAR systems, laser communication and range finding.

The driver operates from a single +15 V supply voltage.

Optional Accessories: PLB-21

Compatible Products: LDS-VRM 005

BFS-VRM 03

BFPS-VRHSP 02
